Variable Multi Flow

VMF

- **COMPACT VERSION**
- **HIGH EFFICIENCIES ALSO AT PARTIAL LOADS**
- **EASY AND FAST INSTALLATION**

Characteristics

Chillers for external installation for chilled water production with high performance scroll compressors and low electric absorption, axial fans, external copper coils with aluminum fins, plate heat exchangers.

In the units (with desuperheater or total recovery) it is also possible to produce free-hot water. The base-ment, the structure and the panelling are in steel treated with polyester anti-corrosion paints.

Versions

NRL_° standard
NRL_L Low noise
NRL_A High efficiency
NRL_E Low noise high efficiency

Operating range: Work at full load up to 46°C
 external air temperature (for more details please

refer to the technical documentation)

- Units with two refrigerant circuits designed to grant the maximum performance at full load, ensuring high efficiencies also at partial loads and giving continuity in case of stop of one of the two circuit.
- Standard Flow-switch, water filter and high and low pressure transducer.
- Possibility of integrated hydronic -kit, which includes the main hydraulic components; it is available in different configurations with or without buffer tank, one or two high and low head pumps.
- Microprocessor adjustment, with keyboard and LCD display, for easy consultation and intervention on the unit via a menu available in several languages.
 Adjustment includes complete management of

the alarms and their log.

- The presence of a programmable timer allows setting time bands of operation and a possible second set-point
- The temperature control takes place with the integral proportional logic, based on the water output temperature.
- Night Mode: it is possible to set a silenced operation profile.

Perfect for night operation, since it guarantees greater acoustic comfort in the evenings, and a high efficiency in the time of greater load.

Night Mode is standard on all low noise versions. For all other versions either the DCPX accessory or "J" inverter fan must be specified to allow Night Mode to operate.

Accessories

- **AER485P1:** RS-485 interface for supervising systems with MODBUS protocol.
- **PGD1:** Simplified remote panel. Allows control of basic unit functions and alarm notification.
- **MULTICHILLER_PCO:** Control system to switch the individual chillers on and off, and command them, in a system in which several units are installed in parallel, always ensuring a constant delivery to the evaporators.
- **AERWEB300:** Accessory AERWEB allows remote control of a chiller through a common PC and an ethernet connection over a common browser; 4 versions available:
 AERWEB300-6: Web server to monitor and remote control max. 6 units in RS485 net-

work;

AERWEB300-18: Web server to monitor and remote control max. 18 units in RS485 network;

AERWEB300-6G: Web server to monitor and remote control max. 6 units in RS485 network with integrated GPRS modem;
 AERWEB300-18G: Web server to monitor and remote control max. 18 units in RS485 network with integrated GPRS modem

- **DCPX:** Device for condensation temperature control, with continuous speed modulation of fans by using a pressure transducer.
- **GP:** Protective grille. Condenser coil external protection against accidental or hail damage.
- **VT:** anti-vibration support, to be fitted below

the sheet metal base of the unit.

Accessories factory fitted only

- **DRE:** Current soft starter device, Available only with power supply 400V/3N.
- **RIF:** Power factor correction. Connected in parallel to the motor allowing about 10% reduction of input current
- **PRM1:** It is a manual pressure switch electrically wired in series with the existing automatic high pressure switch on the compressor discharge pipe

	° 400V/3N/50Hz with circuit breakers		
	1 220V/3/50Hz with circuit breakers		

(3) The sizes 0280-0300-0330-0350 are only low noise L/E with inverter fans

(4) **Temperature limit of produced water: -6°C version "°/L -8 version "A/E"**; The option Y is not compatible with the motocondensing units C; with the option D and T

(5) The motocondensing models are not configurable with the option D and T, and with the integrated hydronic-kit on the system's side.

(6) **On / off fan Standard**, standard sizes up 0500 to 0750

On / off fan Increased, option available for all sizes

Fans Inverter, standard sizes from 0280 to 0350, with no static pressure

Fans Inverter, option for sizes from 0500 to 0750 with static pressure

(7) Buffer tanks with holes for additional heaters are supplied from factory with plastics caps of protection, before system's loading, where the installation of one or all the heaters is not provided, it is mandatory to replace plastic caps with special caps, which are commonly available in the market.

Sound power (cooling operation)

Aermec determines sound power values on the basis of measurements made in accordance with UNI EN ISO 9614-2, as required for Eurovent certification.

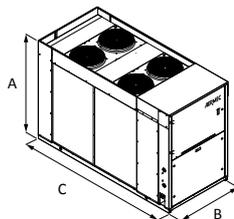

Sound pressure (cooling operation)

Sound pressure in free field, at 10 m distance from the external surface of the unit (in accordance with UNI EN ISO 3744).
